

# Service Level Agreement (SLA)

Dexa service levels, support targets, incident priorities, uptime commitments, and customer responsibilities.

**Generated:** 2026-06-24 07:31

**Website:** <https://dexa.co.ke> | **Support:** [ezeziel@kayapro360.com](mailto:ezeziel@kayapro360.com) | +254725345345

## 1. Service Commitment

Dexa targets commercially reasonable availability for core hosted services, excluding planned maintenance, third-party outages, customer network issues, and force majeure events.

## 2. Support Channels

Standard support is provided through in-app support tickets and published support contacts. Emergency issues should include business name, affected module, screenshots or logs, and business impact.

## 3. Incident Priorities

Priority	Example	Target Initial Response
P1 Critical	Production unavailable, payments blocked, or major data access issue.	4 business hours
P2 High	Core workflow degraded with workaround available.	1 business day
P3 Normal	Feature issue, report mismatch, setup support, or general help.	2 business days
P4 Low	Question, enhancement request, or cosmetic issue.	3 business days

## 4. Customer Responsibilities

- Keep billing, M-PESA, SMS, WhatsApp, domain, and user access details accurate.
- Use strong passwords and appropriate role permissions.
- Report incidents with enough detail to reproduce or diagnose the issue.
- Maintain operational controls for riders, client communication, and delivery execution.

## 5. Data Protection and Backups

Dexa supports backup generation and tenant-scoped exports. Recovery timelines depend on infrastructure, backup freshness, hosting availability, and incident scope.

## **6. SLA Updates**

---

Dexa may update this SLA as the product, infrastructure, and support model evolve. Material contractual commitments should be captured in signed agreements.
